■ Introduction

U-7526M is a UA I/O module that provides 2 digital input channels, 2 digital output channels, 6 analog input channels and 2 analog output. It has a built-in two-port Ethernet switch to implement daisy-chain topology. The cabling is much easy and can reduce the total cable and switch cost. It follows IEEE 802.3af compliant Power over Ethernet (PoE) specification. It allows receiving power from PoE enabled network by Ethernet pairs. This feature provides greater flexibility and efficiency to simplify system design, save space, and reduce wirings and power sockets. It provides a Web UI to configure/control/monitor the modules, connections, and I/O status via a web browser. It is easy, fast, and no extra APP needed.

In industrial communication, UA I/O provides OPC UA Server and MQTT Client protocols (can execute both communications at the same time.). Users can choose the networking mode according to their cases. And to transmit the values of the built-in I/O channels to the Cloud IT system or field control system for reading and writing. Support Scaling to convert the analog signal into a more readable value.

MQTT Client	 Connect to the MQTT Broker to read or control the I/O channel value by the publish/subscribe messaging mechanism. (MQTT Ver. 3.1.1; TLS Ver. 1.2) Can Execute with OPC UA Communication Simultaneously 	
Function		
Web Interface for Configuration	 The system operation can be performed through the browser without installing software tools. Use AES 256 encryption algorithm to encrypt web page setting data for general communication. 	
Scaling	 Convert the analog signal to a more readable value. Function is only available for modules with AI/O. 	
Security	 Based on security considerations, only the service ports needed by the I/O modules are open up, and the rest are not open. Forbidden to use ping: turn off this function so that others cannot scan the device, so as to reduce the possibility of network attacks.
