

SG-3037-G

Triaxial signal conditioner for voltage output type accelerometer

Features

- 3-channel voltage input & output
- Input voltage range: 0-24V
- Provides signal bandwidth: 50 kHz
- Provides 24V power supply for the accelerometer

Introduction

SG-3037 is a Triaxial Signal Conditioner. SG-3037 with 3-channel analog inputs can connect to the voltage output accelerometer, and convert the signal measured from the accelerometer into the analog voltage output. PET-7H16M module collects the vibration data through SG-3037, and then send them via high-speed Ethernet to the data center for processing and analysis.
